No traction? No problem. Apache XC Tracks are built for serious terrain. With improved flotation and stability, they tackle deep snow, mud, and everything in between. Engineered for optimized attack angles, reduced noise, and unmatched durability, this system means all-season dominance.

Can-Am air filters are built for harsh conditions, delivering superior filtration without choking performance. Made to meet exact specs and protect engines from dust, mud, and debris, they're the first line of defense when the ride gets rough.

BUILT STRONG. FILTERS SMARTER.

Each filter features high-density pleated media for maximum dirt-holding capacity, a molded seal for tight fit, and durable construction to prevent collapse in extreme conditions. Engineered to work in sync with Can-Am engines—no guesswork, no compromise.

CAN-AM AXLES ARE ENGINEERED TO EXACT TOLERANCES, TESTED TO ENDURE EXTREME LOADS, AND BUILT WITH HIGH-GRADE MATERIALS TO HANDLE HEAT, FLEX, AND ABUSE WITHOUT COMPROMISE.

Genuine Can-Am axles perfectly match drivetrain, steering, and suspension geometries to reduce steering effort, premature wear, and unwanted loads on components such as ball joints, tie-rods, and bearings.

Can-Am axles do more than just transmit power. They protect your ride with carefully engineered thresholds, absorbing stress to protect the rest of your drivetrain.

Every Can-Am axle is precision-machined, heat-treated chromium and molybdenum alloy steel, combined with TPE CV boots and friction- and heat-reducing grease, resulting in longer joint life.

HOLD THE POWER. TAKE THE HIT.

Axles act as pressure points in the power system, absorbing stress to help protect more complex and costly components. No weak links. Just smart engineering.

Strength, stability, and control. Can-Am A-arms and ball joints are built to keep the suspension locked in and tires planted. Engineered for max articulation, impact resistance, and durability in brutal terrain, they help keep machines running and riders moving.

MADE TO FLEX. BUILT TO HOLD.

High-strength ball joints absorb punishing hits and deliver full-angle movement without binding. Superior sealing and lubrication keep dirt out and performance in. Designed to maintain contact with the ground, because traction means control, and control means confidence.

These are the same high-performance pads installed at the factory, now available in complete kits for quick, full replacements. Engineered with Can-Am, in collaboration with Brembo, to deliver consistent stopping power, even in the toughest off-road conditions.

BUILT FOR BRUTAL STOPS

These pads are optimized for off-road abuse, built to handle heat, grit, and repeat impact. Every kit includes the right components for a full pad swap, with stopping power that never backs down.

Engineered to fit each Can-Am model, BRP drive belts are precisely calibrated to match clutch systems for maximum transfer, zero RPM loss, and unmatched throttle response. Field-tested and race-proven, they're built to take the heat. Literally.

DESIGNED TO PERFORM. PROVEN TO WIN.

From dyno to desert, BRP drive belts are tested in brutal real-world and race conditions.

1

THE TOP COG

adds strength and limits deformation. It's made from a different compound than the lower cog to suit distinct power transfer roles.

2

ADHESION LAYERS

promote bonding between the cogged undercord compound and the aramid cord.

3

THE TENSILE CORD

is made with lightweight, high-strength aramid cords, each layer matched to your vehicle's specific power and performance demands.

4

THE UNDERCORD

is a custom mix of natural/synthetic rubbers and high-performance materials, designed for ideal flex and clutch engagement.

5

IMPREGNATED FABRIC

boosts wear resistance for both the belt and your clutches.

DUPLICATE OF LOAD APPLIED

DEFORMATION RESISTANCE UNDER STATIC COMPRESSION TEST

BRP XD roller

The **BRP XD roller** withstands 4 times the load in compression compared to most popular aftermarket thermoplastic-type rollers with a displacement/deformation of 0.5 mm.

QRS XD rollers are built to take a beating. With more impact resistance and less deformation than standard designs, they hold up under pressure, protect belt performance, and keep the pulley system running clean and smooth, ride after ride.

BUILT TOUGH TO KEEP POWER MOVING

Stronger than fiber rollers and more stable than thermoplastic designs, QRS XD rollers resist high-impact shocks and deformation that can seize pulleys or shred belts. A major upgrade for reliability, durability, and consistent performance under stress.

CYCLING TEST

BRP XD Roller

Thermoplastic Type Sample 3

Thermoplastic Type Sample 2

Thermoplastic Type Sample 1

Fiber Type Sample 2

Fiber Type Sample 1

The **BRP XD rollers** performed 40% more cycles* than the average for thermoplastic-type rollers and 99% more cycles* than the average for fiber-type rollers. Both thermoplastic and fiber roller tests ended in failure.

*Based on 20,000 cycles of our XD rollers, without any signs of failure.

Powersport engines are some of the most powerful for their size. This reality creates a lot of pressure and stress on all components, including oils and lubricants. Finding the right balance between lubrication and durability is hard, but that's exactly what you'll find in every XPS bottle. Our chemistry evolved over thousands of testing hours to deliver power and durability like only XPS can.

XPS

OIL THAT GOES THE DISTANCE

XPS OILS

Developed as an integral part of the engine and vehicle, XPS lubricants don't settle for a certification. Always looking for more power and torque is in our DNA. This quest for performance created our need for specifically engineered lubricants.

HOW TO MEASURE

- For best results, have someone else take measurements.
- Measure body in underwear.
- Tape must be snug but not tight.
- If measurements fall between two sizes, order the larger size.

1 HEAD	Around your head, from the center of the forehead, above the ears and over the natural bump at the back of the head.
2 ARM LENGTH	Let the hands hang down on the side in a slightly bent position. Measure from the center of the back of your neck, along the length of your arm, to the wrist.
3 CHEST/BUST	Measure under your arms, around the fullest part of your chest.
4 WAIST	Measure around your natural waistline, keeping one finger between the tape and body.
5 HIPS	Across the widest part of the seat.
6 INSEAM	Without shoes, from your crotch to the floor.
